Exceptional Features Of Azarakhsh Refractory

One of the significant and exceptional features of **Azarakhsh** firebrick is its thermal mass. In other words, because of its high density, this brick is capable of heat storing and then releasing it little by little. This quality makes brickhouses cool during the hottest months of the year and, moreover, the brick walls retain warmth during the cold season of winter in order to avoid the waste of heat & energy. Another feature of **Azarakhsh** firebrick is the wide variation of colors among the bricks due to the presence of dyeing elements in minerals which are revealed after the process of production. This quality as the cause of variation in colors, makes the color of firebricks unchangeable and protected from sun's rays. So get a perfect view from us

The Biggest Manufacturer Of Fire-Proof Productions & Brick Face in the Middle Esat

► *Some Properties Of Azarakhsh Refractory Brick*

- Resistent to thermal changes-
- Resistent to freezing
- Installable with usual mortar or without any mortar in the floor
- Environment friendly because of not having lime & asbestos
- Durable color
- Resistent to heat , cold , moisture , the rays of the Sun, acidic rain
- Acoustic , thermal insulation & up to 1200 fireproof
- Different color options (classic , antique , modern)
- Applicable in all circumstances
- Solid sticking of brick & mortar

No Efflorescence in Fire Bricks

All bricks are made of natural materials, and natural minaral materials contain some organic elements; As a result of Absorbing humidity,these elements produce efflorescence on the surface of a brick and reduce the beauty of the facade of a building.This issue is quite tangible and clear in all clay bricks.The existing organic elements within minerals (which are the source of efflorescence) can be totally destroyed by heating them up at over 1100 degree centigrade The presence of theses elements during the production process. of **Azarakhsh** firebricks are decreased to its least degree antherefore the amount of efflorescence during the test in this type of brick is almost zero.
